Disposable Medical Curtains

Offering total peace of mind where it matters most

TECHNIBLINDS

Commercial blind solutions by the professionals
The disposable Medi-Curtain system by Techniblinds enables hospitals to balance time and cost against hygiene issues. With infection control being one of the most crucial aspects of the hospital environment, disposable Medi-Curtain can play an important role in hospital infection control strategy.

Some of the benefits of the Disposable Medi-Curtain system:

- Highly effective infection control
- Cost effective
- Smart appearance
- Easy to fit and replace
- Easy to monitor
- Environmentally friendly
- Fire retardant BS 5867 Part 2 Type C Compliant
- 100% Recyclable

**Fighting back against hospital acquired infections**

Disposable Medi-Curtains by Techniblinds have been proven to be a vital tool in the battle against hospital acquired infections. When hospitals have introduced disposable curtains on their wards, alongside other infection control measures, they have seen significant reductions in infection rates.

Disposable Medi-Curtains are economical and easy to fit and change. This means they can be replaced frequently, which is key to their effectiveness in infection control.

**Treated with Ultra-Fresh® antimicrobial protection**

The use of standard fabric curtains in hospitals has been scientifically linked to the source of ‘comparatively high counts of organisms’. Because disposable Medi-Curtains are manufactured from 100% polypropylene, which is an inert material, infectious organisms struggle to survive within its fibres.

To aid the prevention of infection, each curtain is treated with Ultra-Fresh® antimicrobial protection which has been tested against a full range of dangerous bacteria and is effective against MRSA.

**For all types of track system, ready to hang**

For quick and easy replacement, disposable Medi-Curtains are supplied with the hanging system already fitted and are available in the standard styles: Eyelet, U Top and Peg Top. When ordering your curtains, simply state your preferred style.

**Easy-to-monitor curtain change intervals with customised labelling system**

To ensure they are changed regularly, each disposable Medi-Curtain features a label to be completed by staff. This allows hospitals to monitor curtain change intervals and self-audit the curtain change policy for each individual department.

**Ease of use, fast to replace**

Unlike conventional fabric curtains, Disposable Medi-Curtains can be replaced in a matter of minutes. The full width curtains are supplied in boxes of 5, half width 8, and are easy to carry and store within a hospital ward. New curtains are then close at hand for when staff need to fit a replacement.

Curtains also feature a handy velcro fastening for easy storage when not in use.

**Clean and smart appearance**

Supplied pre-pleated, disposable Medi-Curtains stay looking neat and tidy and will smarten up a hospital ward usually fitted with conventional curtains. When not in use, just stow the curtains away compactly against the wall, giving patients and staff more light and generally improving the hospital environment.

**Flame retardant**

Disposable Medi-Curtains comply with the fire retardancy standard BS 5867 Part 2 Type C.

**Gentle on the environment**

Our curtains are fashioned in polypropylene which has one of the lowest environmental impacts of any material available, man-made or natural.
However large or small the order volume, Techniblinds prides itself on a fast, flexible and reliable service. Offering proven expertise and technical know-how, we maintain close control of the whole ordering cycle from conception to completion.
